

BE207

GROUND SPIKE WITH FIXED SOCKET AND ANGLE IRON BASE

The ground spike comes in two types available with or without tilt, also in angle iron or round ground spike option.

Designed by Barenco and manufactured in our own workshop to a high standard.

The ground spike is 12" long on all versions and will accept up to 2" mast. Using the ground spike with a 20' mast should only require one set of guys to secure mast.

The availability of the tilt version allows larger aerial systems to be erected with fewer people for a more permanent site.

Round spike was developed for use with a ground plane disc with a 2" (50mm) hole in the centre.

Finish : Sherardized

Designed and Manufactured by BARENCO
